## CONTEXT

The ECO Hosting.net project aims to contribute to a reduction of the environmental impact of tourism in European natural areas, protected or not. Therefore, it proposes to respond to the needs for awareness raising, training and technical support in the field of the environment:

- tourist accommodation managers working in European natural areas, especially the most isolated ones,
- and tourists who frequent these accommodations

These target groups will be able to strengthen their environmental knowledge and skills through accessible, high-quality European training resources, resulting from a cross-fertilisation between European training, tourism and local development operators.

ECO Hosting.net aims to provide fully autonomous training via dynamic and didactic online resources. For those with web access constraints, all content will be downloadable offline.

## PROJECT PRODUCTIONS

- An **environmental self-diagnostic guide**, allowing managers of tourist accommodation to identify their weak points and their room for improvement with regard to environmental issues (water, energy, waste, etc.).

- **Ecohosting.net training content:**

For tourists who wish to learn ecofriendly behavior for their stay in accommodation located in a natural area, didactic videos dedicated to eco-gestures to adopt, and information and training content to act as an eco-citizen.

For accommodation managers, a series of thematic chapters, taking up the axes of the self-diagnosis guide

- An **E-Learning platform** accessible to all, putting ECO Hosting.net content online for free and interactively.
