Erasmus+ Programme
of the European Union

Stairway to the SDG aims

The objective of Stairway to SDG project is to **promote the values of sustainability** and to increase global awareness of people who are able to internalize these values and **transform them into sustainable everyday practices**.

The general idea of this project is **anchored in the new 2030 Agenda for Sustainable Development** and the 17 Sustainable Development Goals (SDGs) established by the UN.

We want to aim our action specifically at those professionals (educators, tutors, and teachers) **who have a possibility to reproduce the message**, given their positions. This is done by creating awareness and promotion of an regular debate consisting of **practices and innovation**.

Throughout the project, we want to **use and foster a multidisciplinary, interdisciplinary, and technological approach** in order to prepare and qualify our "Sustainability Makers". The objective will be to involve these people **during the whole process** of creation of our intellectual outputs

How will the project help the teachers?

- You will gain competencies to empower students
- You will receive guidance on how to implement sustainable development to save you time, improve your teaching, and make your life easier
- We help you to link to sustainable development education to professional training (real life examples)
- Use our engaging mobile tool with your students to measure attitude and behaviour regarding sustainable development, and show improvement over time
- You and your students can join our vibrant online community
- Use our publications to influence change in your organisation
- You will receive recognition of your contribution to the project through certification/credits
- You can change the world!!

Co-funded by the

of the European Union

How will it happen

The project will be developed in **two phases**.

During the first phase, we will construct our first intellectual output – **an online platform and a mobile app**– . Those will function as a barometer for organizations as well as for the general public with the objective of **analysing and registering the level of sustainability** of each one of them.

These same intellectual results will be later **tested** during the second phase via **5 different pilot experiences** in VET centres of Spain, Belgium, England, Italy and Portugal, which will enable any following improvements.
